External links night on Earth IMDb Retrieved from Powered by Reelgood Netflix knows the natural doc series can't get just spectacular footage of exotic animals anymore, and that's why Night on Earth uses a new wrinkle: high-tech cameras that capture the action of a multitude of fashionable night critters. Some of this activity has never been seen before, as narrator Samira Wiley points out, with great emphasis on innovation at hand. So of course we are going to heart hell out of the colorful and fascinating images of waddling penguins and violating whales and challenging mating rituals of Mexican staring frog sri lanka to find our interest perked. But does this series really offer something fresh and new, or does it fail to transcend its tricks? NIGHT ON EARTH: BROADCAST OR SPEND? Opening shot: Time-lapse photography is phenomenally starry, purplish midnight sky. Gist: Wiley speaks to stop fragments during the scary footage. Darkness. Danger: The lion, glowing in the eye of the heat-seeing chambers, open the field fights wild. Night worlds. Full of fear. And a miracle: The glowing scorpion takes the idol to the mouse. Where's life. And death. Controlled by light. From the moon: the lion yawns in the profile, silhouette in the dark. This is an introduction to the episode is named Moonlit Plains, which involves exposed savannahs and desert night dead. First there is a lanky, fast cheetah who, Wiley nars, makes a third of his hunting night- something scientists have only recently learned because of fancy ultrasensitive cameras deployed under the full moon light. Elsewhere, heat-sensitive cameras capture the pride of lions with eyeballs in various animals – the cubs harass the hippie to no avail, and the mother pairs a needle into one hungry young lion's nose. Lesson learned. Wilderness natural porn: Cactus flowers bloom at night, and bats in them glue faces, using long tongues to make waist nectar. Geckos chirp their mating call. Spiders fight for territory. The barn owl descends on desert clay. On the Coast of Peru, the cubs of fur seals survive a rough night, scattering from the hungry, galumphing sea lion and pointing at vampire bats, gliding over the rocks. Lunar wax. The moon is disappearing. Moons all night, like the moon. What does he see as he looms over life on Earth? I guess we'll find out in these six episodes. Photo: Netflix Our Take: First of all, I look forward to the most practical application of these revolutionary new night cameras: snuffing out all the shadows of Draculas, Babadooks and other ndry lies in entities that reduce our quality of life. You sleep easy knowing a creature drooling under your bed is doomed to be exposed as a sad, nasty, nonthreatening fearmonger, like most Republican office rimshot! As for Scorpion v Mouse: Dawn of Justice - this is easily the most revealing and gripping sequence of the night on Earth, partly because we learn this particular rodent species is protected from scorpion poison, and not only absorbs sore throats before eating from crunchy arachnids, but later rears its adorable li'l head and whispers like squeaky hinges on the door of the Amville closet. DO NOT CROSS THE SCORPION-KILLING MOUSE, BECAUSE IT WILL FREE THE HELL. The disappointing thing is, I had to recruit Google to find out that this is a grasshopper mouse native to Southwest America, illustrating how night on earth is light on details and heavy on fashionable images. The latter things are obviously highlighted here, although it doesn't make sense to trumpet a series of new scientific discoveries and then don't bother to share some basic facts about your subjects. I think too much brain-thinking stuff can bust all the HYPERBOLIC narrative that is apparently written by people who moonlight as black metal lyricists. Of course, we're shooting up this stuff to see amazing things away from the cute raccoon family I once spotted munching in a mulberry yard, and it mostly provides that expectation. First of all, this debut episode features exactly zero monkeys, but future episodes - which will sound like post-duct excursions to jungles, oceans and frozen climes - promise some frolicking monkey footage. What natural doc without frolicking monkey? Few! Sex and skin: a pair of grasshopper mouse leers, red-eyed moon light, no scorpion engages in foreplay. Whatta perv. Sedation Shot: The opening shot of the reprise. Wiley: Who knows. What other secrets are revealed. Night. Earth. Monkey secrets. Hope. Sleeper Star: Is this gorgeous fluorescent shade for scorpion lovers, locking their spiked tails into an embrace that is alarmingly close to looking like a heart? Maybe, less creepy-crawly, and more majestic, is a remarkable conglomerate - and terribly endangered - of black witches gathering in a desert oasis. Most Pilot-y Line: Everyone got sick of guitar reefs to go with this? Vampire bats are the most active on the darkest nights. I'm looking for blood blackness. Our call: STREAM IT. Night on Earth doesn't give us a head-exploding visual benchmark for the series Planet Earth, or a vital and urgent climate change lecture for the next Netflix series, Our Planet – but it's stuck enough to eerie and compelling cinematography to keep us watching. Netflix As the market becomes increasingly crowded every season, it becomes increasingly difficult for natural documentaries to simply capture wildlife as it is. In response to the excursions around global habitats or as a way to simply add an extra layer on them, become something of an arms race to a settled format and inject it in a few fresh angles. Last year, Nat Geo Hostile Planet promised a less disinfected, more dangerous approach to the ongoing interaction between predators and prey. Several series emphasized their detailed scope, touting not only the image of the planet, but one that sets their eyes on each of the seven continents. Add a new Netflix documentary series Night on Earth to that growing list of hooks, a six-part exploration of what's happening in nature under the sun. Unlike some of these other twists, the distinctive feature of this series can't come without some major visual changes to what the audience can use from these specialties. By observing active night animals without the benefit of natural light, Night on Earth uses some different technologies, including cameras that are particularly sensitive to moonlight, and several variants that can track heat as it moves through the horizon in recognizable forms of animals. Night on Earth is far from the first nature-oriented series to find and depict the places and creatures of this planet that feel like the vestiges of other galaxies. However, there is something about how certain images lean towards unfamiliar color saturation or capture different animal textures that emphasize the idea to the point of capture. In a few orienteering setting shots here and there, many of these episodes commit so completely to this alien approach that it's a legitimate surprise to be redeemed back into reality when more traditional looks at different creatures start to sneak through. With fewer skirmishes and expectations than similar series, Night on Earth also plays with scale ideas, in addition to how these animals work in the wild. Drenched in different kinds of light and crossing terrain, which becomes more unrecognizable, the more powerful the lens, Night on Earth gives each creature the same opportunity to fill the frame. Whether close to a lion crossing a plateau or a small clay on an owl through mammoth sand grains, it's a democratizing approach to the position of each animal, which keeps larger wild beasts from dramatic attention. Night on earth The only drawback of this visual freedom is that more traditional elements feel less necessary than usual. Samira Wiley is a wise storyteller, adding a little light emotional coloring to the explanations of this unfamiliar nightly behavior. But sometimes the focus on trying to psychoanalyze these creatures feels inappropriate, especially when the initial repetitive impulse seems to survive. In this case, filling in understanding is much more effective than speculating why. There are several tons of curveballs available at Night on Earth. While many photosensitive action centers escape from danger (or lure unconscious victims into it), there are when the show is paused to download to smaller points of different and kind of internal communication. The structure of one particular sequence, highlighting the methods of mating tungara frog, stops with just a few chambers of sitcom, a heavy dose of earned absurdity just before the dangers again grow its slo-mo head. The season's penultimate episode also takes the unusual step of establishing an entire chapter in the world's major cities. Venturing through parts of Singapore, Thailand and the Pacific northwest that are occupied by people, Night on Earth supports animal POVs, on people driving and walking through the frame like passers-by rather than kindle spirits. There are subtle suggestions toward the importance of conservation over most of the rest of the show – this installment report on responsible urban planning seems to come a few decades too late, but maybe there is a subconscious effect to be gotten from facing how certain types of function are when most of us are not looking. For the show set primarily after sunset, as well as a staggering amount of color here, too. The show can very easily lean towards the basic concept of bioluminescence, simply following all the living things on the jungle floor, which glow in all forms of neon. When trying to fill the screen with as many details as possible, tiny streaks that would otherwise get caught in the wider view from the air, stand out here as small small phenomena. Again, it's not necessarily a unique night on Earth, but as it checks off those mandatory nature doc boxes situates to show a consistently otherworldly feel. (Exhibit W: Prismatic threads of the jungle spider leaving the trail are enough to make even the most endurance arachnophobes reconsider.) So Night on Earth taps into one of the main drives that has kept this long natural doc boom in the first place. He scratched the human need to remind you that there is more left to discover that there are still some quasi-mystical elements of nature that science barely had the ability to observe, much less explain. Night on Earth also sprinkles some surviving images of plant life and other notable astronomical events to show that understanding this ecosystem goes beyond fast and large and strong. Like there is no light without darkness, Night on Earth tries to live unexpectedly. Grade: B+ Night on Earth is now available for streaming on Netflix.
